

Dedicated to ozone performance

www.AquaSunOzone.com

The XL-80 produces pure ozone, nature's powerful oxidizer, that destroys organic and inorganic contaminants INSTANTLY on contact!

The XL-80 automatically sanitizes your spa continuously and requires no maintenance.

- Ozone KILLS harmful, Chlorine tolerant parasites, Cryptosporidium and Giardia.
- Ozone KILLS bacteria, viruses and mold and destroys biofilms.
- Ozone REDUCES chlorine use by up to 90% saving you money and maintenance time.
- Less chlorine and bromine in your spa makes it safer on your skin and eyes.
- Ozone [O₃] is environmentally safe, breaking down to pure oxygen after its work is done.

Installation is quick and easy. Enjoy clean, safe spa water today!

Is ozone sanitation new?

Ozone has been used for over 100 years in municipal water systems. Today, Ozone Sanitation is widely used for many applications: fruit, vegetable and meat processing plants, tank disinfection, well water, drinking water, commercial & residential swimming pools and spas.

How does ozone sanitize?

Ozone is an unstable gas consisting of 3 oxygen atoms. The gas will readily degrade back to oxygen [O₂], leaving a single oxygen atom, or free radical, that is highly reactive to bacteria, viruses, spores, parasites, organics, chemicals and dissolved solids. These harmful substances are destroyed and eliminated from the pool or spa water through filtration.

Is Ozone safe to use in a residential spa?

Yes, First of all it makes the water safe by killing and sanitizing. Ozone is approved by the EPA as a microbial and approved by the FDA as a microbial additive to bottled water. It is used in many food processing plants.

Is ozone treatment a replacement for chlorine in my spa?

No, ozone sanitation drastically reduces the amount of chlorine needed to keep your water safe. Under ideal conditions, ozone alone could replace the need for chlorine. In practical use, you will always want to have a small residual of chlorine in the water. Butyou will need to use only 10% - 50% of the chlorine that you are using currently, which is a huge savings of money and work to keep you water clean and safe. A big misconception is that if you use a salt system you are not using chemicals; but, what you may not know is that the salt cell creates chlorine.

Will using ozone decrease the amount of maintenance needed for my spa?

Yes. ozone sanitation is automatic. It is on whenever the pump is operating. It is completely silent and costs pennies a day to operate.
